

# DMTS CONVERSION TRACK SYSTEM

- ✓ Improved soil health
- ✓ Enhanced field access and efficiency
- ✓ Increased stability and traction

## TRUST IN THE QUALITY OF STRYDER.

Designed, manufactured and built right here in Australia, the newly released Stryder DMTS system enhances soil health through track systems that distribute weight across a broader surface area, effectively reducing soil compaction and fostering healthier topsoil.

This system ensures stable driving with enhanced traction and flotation, reducing risks like rollovers and slippage, ensuring consistent performance in tasks such as deep ripping, spraying, or any other agricultural operation.

Invest in Stryder Track Systems and experience the benefits first-hand.

Say goodbye to soil compaction and hello to improved performance.

FOR THE FUTURE OF AGRICULTURE
